

Quick-Adjust Frame: Our quick fix for rotating riders!
Need a little more leg room? Or maybe a little less? It doesn't matter: with the Quick-Adjust Frame, you can alter the frame length by up to 25 centimeters (10 inches) without having to lengthen or shorten the chain.

SON: Amps to go
The light and smooth-rolling SON 20R is the most reliable electricity source for bikes and trikes. Constant power supply in any weather, maintenance-free, and durable. The best eco-power for outdoors.

Differential: Power for two
It's the invention that made the car possible: The differential. And on the KettWiesel, it's the final ingredient for ultimate riding fun, especially on loose gravel or sand. Specially designed by Marec Hase for the KettWiesel, the Differential transfers the pedal power to both rear wheels. It shows its true colors on rough terrain or muddy slopes, where others skid out. And if you want to do wheelies on the KettWiesel, the Differential is an absolute must.

Speed-drive
Double your gears with the touch of a button: The Schlumpf speed-drive has become a cult among bike techies worldwide. Easy shifting with the heel of your shoe transforms an 8 or 9-speed gear system into a full, tour-ready 16 or 18-speed system with a generous gear range.

Children's Crankset: Me too!
For children and adults less than 1.55 m (5'1") in height, we recommend using our Children's Crankset with 110 or 140 mm crank arms (instead of the 170 mm standard length) for improved ergonomics. This crankset provides a reduced pedaling radius for shorter legs.

Gear Systems: The choice is the hardest part
For a custom-made bike or trike, it's you who decides the number and range of gears for your unique path and pace: Replace the front derailleur with a simple chainring in the front – or would you prefer three chainrings for a wide range of gears? And in the back: Will it be the 9-speed Shimano Tiagra or the fine SRAM Force? Or maybe you're the type who values maintenance-free, all-weather hub gears? If so, you can choose between the uncomplicated 8-speed Nexus from Shimano and Rohloff's ingenious all-round Speedhub with 14 gears and an enormous gear range.

Universal Coupling

This multi-functional coupling will attach as easily to your shopping trailer as to the Hase Trets or a child trailer.

And a trike tandem can be created by attaching the fork of a second KettWiesel. Even Weber and Bob-Yak systems: Welcome!

Lowrider Rack

Even more space for touring luggage or groceries: Lowrider racks put more weight on the front wheel without affecting the handling. Standard lowrider panniers fit easily and securely onto the rack (not compatible with the carbon fork, suspension forks, and 16-inch forks).

Side Pouch: Travel light

The perfect place for stowing those small things you can't live without: Keys, driver's license, business cards, and cell phones easily fit in the cool pouch, which fastens effortlessly to the fender. The perfect transport solution for short trips without luggage.

Trailer Bar: Hitching a ride

Simple name, fine piece of equipment: The Trailer Bar turns any bike into a KettWiesel-towing machine – without sacrificing safety: The integrated overrun brake system works automatically.

Luggage Bag

The new Hase Luggage Bag from Ortlieb can carry a whopping 50 liters of luggage. Hang it with a simple click onto the seatback of the trike for an ultra-secure load. The low position of the Luggage Bag even improves the trike's impressive cornering stability.
