

Bike Case: Wheels on wheels
International riding enjoyment requires safe bicycle transport. The complete, disassembled Pino Fast or basic Pino with fenders, racks, and other accessories removed fits easily into our Bike Case. And there's still plenty of room for stowing smaller parts.

SON Hub Dynamo: Light up the night!
The optimal light source for tours or daily commutes: SON's specially designed hub dynamo for 20-inch wheels. Light and smooth-rolling, powerful and completely reliable in all weather conditions. The eco-power outlet for the road.

Tabus Luggage Rack: For large loads
Narrow, strong, lower lying: The 25CrMo4-steel rack is ultra-stable and can carry an impressive 40 kg (90 lbs) of luggage. The low positioning of the rack stays ensures a low center of gravity – which means optimal stability and handling, even when fully loaded.

Suspension Fork I: What pothole?

Be it cobblestones or potholes: The Spinner Grind 1 Suspension Fork irons out the bumps – meaning even more comfort, especially for the partner in the front seat. But beware: the extra comfort makes it even harder to call it a day.

Suspension Seat Post: Our boss's chair
Comfort for the captain: The finely tuned and non-rotating Suspension Seat Post from Airwings lets the boss cruise smoothly over the most uneven surfaces. The one in charge, after all, should also have a comfortable seat.

Suspension Fork II: Comfort de Luxe

Comfort tuning: The fork's 80 mm of travel make any tour feel like a glide. The ultra-light aluminum Suspension Fork from White Brothers is air damped and can be finely tuned to the weight of the riders.

Rohloff Speedhub: Cool gears (w/o pic.) 14 gears in one can:
The Rohloff is the best hub on the market! Easy to shift – whether parked or starting uphill with a full load – a vast gear range, even gear spacing, and 100% resistant to dirt and moisture. And all of this at the twist of a wrist!

**Double Kickstand:
Fidget resistant**

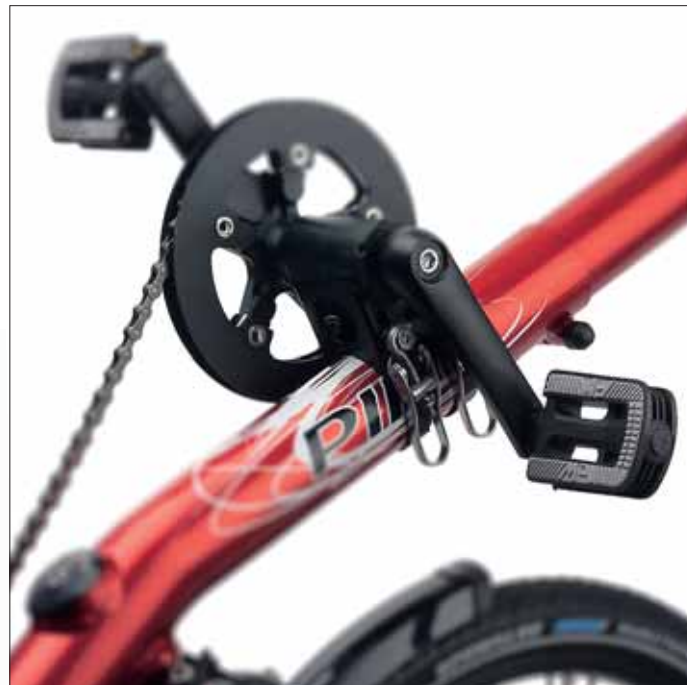

Developed by Hase, loved by tourers everywhere. The bicycle is braced for packing and unpacking and absolutely untipable, even when the young stoker in front has the fidgets: The Double Kickstand can hold a total of 100 kg (220 lbs), including "lively loads".

Double Grips:
Sporty or ergo ... your choice!
Whether joy ride or competition: With the additional handlebar grips, the pilot can alter his or her position as desired for optimal comfort – without having to adjust the handlebars.

Lowrider Rack: Tutti completti!
The Lowrider Rack under the recumbent seat carries up to four panniers – which, combined with the rear wheel luggage racks, brings the total capacity to 6 panniers! The six-pack hangs low and between the axles. Nothing could be safer!

Pino Steel: The true original
No old iron: Steel lovers and tandemists who prefer a one-piece frame can still order the original Pino in high-quality 25CrMo4 steel, a real status symbol in classic ebony.

Children's Crankset: Kid power!
The Pino as a family taxi? No problem, with the Children's Crankset! It can be easily mounted to the front boom and adjusted to your child's leg length with a quick-release mechanism. Just pull the chain around the chainring, and it's off to school with a proud peddler in the front seat.
